## WEBSITE EXPLANATION

On my website the user will be able to find out all players at a club or all the clubs a player has played for. It can also tell you what league that club is in and its current ranking. It will also be able to tell you what awards each player and team has with a description included. It will also be able to tell you the total number of appearances that player has along with their current age. It can also tell you the amount of international trophies each country has won along with what country each player plays for.

## COLOUR PALETTE

## Fonts

### Headers:

<https://fonts.google.com/specimen/Playfair+Display?preview.text=TEST%20TEST%20TEST%20123>

### Paragraphs:

<https://fonts.google.com/specimen/Oxygen?preview.text=TEST%20TEST%20TEST%20123>

### *Navbar:*

<https://fonts.google.com/specimen/Kaushan+Script?preview.text=TEST%20TEST%20TEST%20123&classification=Handwriting>

### CODE:

```
/* Sets up Custom font */
@font-face {
  font-family: 'Playfair Display';
  /* Imports font from URL */
  src: url(/static/Fonts/Playfair_Display/PlayfairDisplay-VariableFont_wght.ttf);
}
```

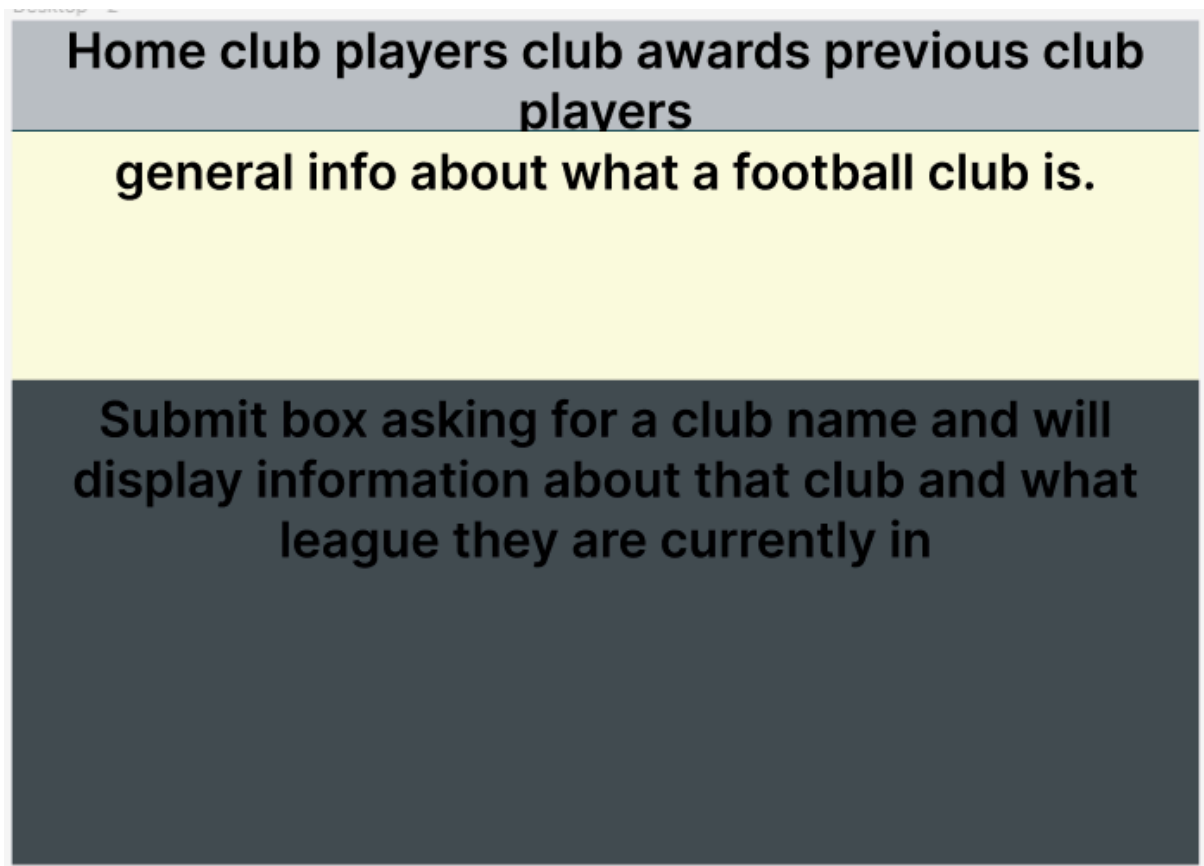

# WEBSITE MOCK-UP

## HOME PAGE

After going into a page it will have a new navbar about things more in depth about the page with a home icon to escape back to the main menu. Submit boxes will be used to help navigate through the website such as inputting a player name to find out what clubs they have played for.

## CLUB PAGE AS AN EXAMPLE

Extra drop down nav bar is an option too

## BASIC WEBSITE PRINTING CODE

### PYTHON

```
@app.route('/players')
def topping():
    db=sqlite3.connect(DATABASE)
    cursor=db.cursor()
    sql='SELECT * FROM Players'
    cursor.execute(sql)
    results=cursor.fetchall()
    return render_template(playerss.html',results=results)
```

## HTML

```
{% extends 'layout.html' %}
{% block content %}
{%for player in results%}
    {{player[1]}}
    
{% endfor %}
{%endblock%}
```

## SQL STATEMENTS

(Also saved as views in database file)

Player club appearance

```
SELECT Player.player, Club.club, club_appearances.appearance FROM club_appearances
INNER JOIN Player ON club_appearances.player_id = Player.player_id INNER JOIN
Club ON club_appearances.club_id = Club.club_id
```

player international appearances

```
SELECT Player.player, International.country, international_appearances.appearances
FROM international_appearances INNER JOIN Player ON
international_appearances.player_id = Player.player_id INNER JOIN International ON
international_appearances.international_id = International.international_id
```

Player award

```
SELECT award.award, Player.player FROM Player_Award INNER JOIN award on
Player_Award.award_id = award.award_id INNER JOIN Player ON
Player_Award.player_id = Player.player_id
```

Past player clubs

```
SELECT Player.player, Club.club FROM past_player_club INNER JOIN Player ON  
past_player_club.player_id = Player.player_id INNER JOIN Club on  
past_player_club.club_id = Club.club_id
```

international award

```
SELECT award.award, International.country FROM International_Award INNER JOIN  
award on International_Award.award_id = award.award_id INNER JOIN International  
ON International_Award.international_id = International.international_id
```

club award

```
SELECT award.award, Club.club FROM Club_Award INNER JOIN award on  
Club_Award.award_id = award.award_id INNER JOIN Club ON Club_Award.club_id =  
Club.club_id
```

Dos commands

```
H:    changes to h drive  
cd    blah change into the blah directory/folder  
cd ..  go up one level  
dir    directory listing  
cd \   change to root  
git commit  commits changes to git  
git push    pushes commits to github
```

## DATA MANAGEMENT

Templates are separated into categories based on what sub heading they are in so pages that you get to from the HOME page will be in the home folder inside templates and if it is from awards it will go in the awards folder inside of templates. Photos will be categorised based on what they are for such as players, club emblems or trophies. CSS files will be named after what section of the website they are used for such as players.css or international.css.

## JUSTIFICATION

The design of my website follows standard conventions of having a navbar at the top of the screen that sticks with the page, then having a home button means anyone can exit the page they are on. Also having the nav bar change is justifiable as other websites do use this and the dropdown option for the home page also fits standard regulations. The information I am displaying is all public, not private. My website is displaying information that a footballer would want to know like what teams are in a certain competition or what clubs have won a league. This is justifiable layout as this is what the [Premier League](#) website uses as well with drop down navbar links.
